LAPIS – User guide for the database

The wiki header contains several links:

- **Inscriptions**: here you can find a map of Istria with all the locations indicated and with list of all the inscriptions in the database with their basic data. By zooming in the map, locations of the inscriptions become visible, and by clicking on individual pins, links to the inscription pages are shown. The list is in a table format; all its columns can be sorted.
- **Filter**: here you can get a list of inscriptions according to several criteria: general ones, textual ones and physical ones (hit "Expand" to open the latter two options). Just select or type values of whatever parameters you are interested in, leave the others blank, and hit "Filter" – you will get a map and a sortable table with listed inscriptions that fit your search.
- **References**: this is a list of references used in the wiki. Each of them has its own page.
